

Roadmap to Spiritual Awakening. . .

Lecture: The Problem of Physical Density

### Questions:

- Q1. Why do you have to choose the spiritual path in the first place?
- Q2. Why is there no spiritual path in the upper dimensions of the heavens?
- Q3. What is the purpose of the spiritual path?
- Q4. What was the ultimate objective in creating the human physical body?
- Q5. What was the first order of business in creating a body that could hold light?
- Q6. While ultimately unsuccessful, what benefit was derived from experiments that involved implanting crystals in the physical body, manipulating light to make it compatible with the body, and in creating a beam of light to bathe Earth's light workers?
- Q7. What were the observations about the places in the body that were able to hold light?

### Answers:

- A1. The density of the Earth is too great to allow the soul to manifest into a physical vibration at will.
- A2. The heavens are already a place of spirit where love is omnipresent and the essence of the Godhead permeates all. All in the heavens is already Oneness.
- A3. The purpose and reason for the spiritual path is to do the practices that contribute to the raising of the physical being's vibration.
- A4. The ultimate objective was to create a body that could hold light.
- A5. The first order of business was to create a body that could survive in the harsh density of the physical plane.

A6. These experiments helped show the angelic caretakers of the Earth where some light frequencies actually did establish themselves within some structures of the physical body.

A7. The physical body held light in places at the molecular level that did not have specific functions. If bodily forms were used for physical work or movement, or fulfilled other physical demands, their ability to hold light was negligible.
